Clifton Developments Ashbourne

This is an installation of two ECR ground source heat pumps with 7 x 30m ground loops beneath the driveway.

The system not only provides the hot water for the house, they also supply the hot air heating and air conditioning via the 2 number Unico air handlers positioned in the loft space.

Using the Unico system allows the house to have a balanced and consistent temperature all around the house. The mini ducts are run in the stud walls and terminate at circular CD size outlets positioned in the plasterboard ceiling.
